

Deckhead Mounting Box: VF5637-00

USCG Type Approved
161.002/A53/0

Standard Features

- Protects against water ingress
- Improved performance
- Available in polycarbonate or metal

Overview

The Deckhead Mounting Box is a device which protects bases, sounder bases and sounder beacon bases from the ingress of water or other liquids. It is screwed to the soffit and accepts a variety of Apollo bases.

The Deckhead Mounting Box is used on its own in most cases but there are applications where either an extension sleeve or an adaptor ring is required.

The Extension Sleeve is required when fitting heater or deep bases; the Adaptor Ring is needed for fitting sounder bases, beacon bases or sound beacon bases.

The Extension Sleeve and the Adaptor Ring are sold as an Accessory Kit.

The Deckhead Mounting Box has 6 cable access ports for M20 glands and is secured to the mounting surface via two 5.4mm holes in the webs.
